BIOSEAL MYCELIUM

Biobased Surface Protection

Of all the Mayan temples in Central America, the Bonampak site in Chiapas is one of the best kept secrets of Mayan history. With the murals that can be found there, the Maya show their unprecedented craftsmanship and knowledge of natural materials.

With a unique combination of tree resins, oils and other organic substances, they made a varnish that protected their famous murals for hundreds of years.

By studying these materials and techniques we have revived part of the old tradition. Together with today's knowledge, we make products for various applications, with the aim of making our living environment greener and free from heavy industry.

How to apply BioSeal Mycelium

- Shake well before using
- Make sure the surface is dry and free of dirt and grease
- Apply the first layer with a brush, paint roller, sponge or sprayer
- When the first layer is dry to the touch (after 1 to 2 hours), apply the second layer the same manner as the first layer
- (Optional) When the second layer is dry to the touch, add a third layer for extra protection

Make sure the surface does will not be in contact with water or other liquids

ESTIMATED CONSUMPTION PER M2

3 layer application: **6-8m2**

2 layer application: **8-12m2**
